Frequently Asked Questions (FAQ)

Q1: What is the difference between a partnership and a corporation?

A1: A partnership is a business owned by two or more individuals who share in the profits or losses of the business. A corporation is a separate legal entity, distinct from its owners (shareholders). Corporations offer limited liability to shareholders, meaning their personal assets are protected from business debts. Partnerships, on the other hand, typically offer unlimited liability, meaning partners are personally responsible for business debts.

Q2: How are profits and losses allocated in a partnership?

A2: The allocation of profits and losses in a partnership is determined by the partnership agreement. This agreement might specify a fixed ratio (e.g., 60/40 split), a salary plus a share of profits, or a more complex formula based on factors like capital contributions or hours worked.

Q3: What are the key components of stockholder's equity?

A3: Stockholder's equity includes common stock (representing the initial investment from shareholders),

additional paid-in capital (amounts received above the par value of stock), and retained earnings (accumulated profits that haven't been distributed as dividends).

Q4: How does the declaration and payment of dividends affect the financial statements?

A4: Declaring a dividend reduces retained earnings (on the balance sheet) and creates a liability (dividends payable). Paying the dividend reduces cash (on the balance sheet) and eliminates the dividends payable liability.

Q5: What are some common challenges encountered when learning corporation accounting?
