FAQ

Q1: What is the difference between an *eserciziario di basi di dati* and a textbook on databases?

A1: A textbook provides theoretical knowledge and conceptual explanations of database concepts. An *eserciziario di basi di dati*, on the other hand, focuses on practical application through exercises and problems. They complement each other; the textbook

provides the theory, and the *eserciziario* provides the practice needed to solidify that knowledge.

Q2: Are there online resources that provide similar exercises?

A2: Yes, many online platforms offer database exercises and tutorials. Websites like SQLZoo, HackerRank, and LeetCode provide various SQL challenges and coding problems, allowing you to practice your skills in a web-based environment. These resources often focus on specific aspects of SQL or database technology.

Q3: What type of DBMS should I use for practicing with an *eserciziario di basi di dati*?

A3: The choice of DBMS depends on your goals and resources. Popular choices include MySQL (open-source and widely used), PostgreSQL (powerful and open-source), and Oracle (commercial and robust).
