FAQ

Q1: What is the difference between DownScan Imaging and SideScan Imaging?

A1: DownScan Imaging provides a high-resolution, almost photograph-like view directly beneath the boat, showing details of the bottom structure. SideScan Imaging provides a view to either side of the boat, allowing you to scan a wider area for fish and structure. They complement each other for a comprehensive underwater view.

Q2: How do I update the charts on my Lowrance HDS?

A2: Chart updates typically involve downloading the latest chart data from the chart provider (Navionics, C-MAP, etc.) to a computer. Then, you transfer this data to your Lowrance HDS unit using a microSD card or a direct connection. The specific procedure

varies depending on your chart type and Lowrance HDS model. Consult the Lowrance website and the chart provider's instructions for detailed guidance.

Q3: My Lowrance HDS is freezing. What should I do?

A3: A freezing Lowrance HDS usually indicates a software issue. Try a soft reset (power cycle) first. If the issue persists, performing a hard reset (refer to your manual) might be necessary. If problems continue, a software update may be required or contact Lowrance support for further assistance.

Q4: Can I connect my Lowrance HDS to my smartphone?

A4: Many modern Lowrance HDS models offer connectivity with smartphones through Wi-Fi or Bluetooth. This allows for features like accessing charts on your phone, receiving software updates wirelessly, or sharing data between devices. Check your specific Lowrance HDS model's specifications to determine its connectivity

capabilities.

Q5: How do I mark a waypoint on my Lowrance HDS?

A5: The process for marking a waypoint varies slightly depending on the model, but generally involves pressing a button or using a touchscreen gesture.
