Understanding the Peugeot Tiptronic System

Peugeot's Tiptronic system, a type of automated manual transmission, offers a blend of automatic convenience and manual control. This provides a more engaging driving experience and greater control, particularly in challenging driving conditions. The **Peugeot Tiptronic service manual** is your essential guide to understanding the intricacies of this system.

How Tiptronic Works

The Tiptronic system uses hydraulic actuators to shift gears based on driver input or the transmission's internal logic. Sensors monitor various parameters like engine speed, vehicle speed, and throttle position to determine the optimal gear selection. When you shift manually, you override the automatic system, allowing you to hold a lower gear for better acceleration or a higher gear for improved fuel economy.
